REMARKS:

Further examination of Launch Area "A" at Tyura Tan reveals that a regularly shaped darkened area, apparently circular and measuring approximately [redacted] is positioned near the center of the concrete launch platform. [redacted]

In addition, it is probable that at least eight supporting arms rise angularly from the lip of the concrete platform rimming the darkened area. These arms appear to converge at a point below the top of the servicing tower.

At least two special configuration rail cars, 75/80 feet in length with a tapering end, have been identified in Launch Area "A". Several rail cars 75 to 80 feet in length were sighted in

the support area.
